

# ON-Gard<sup>®</sup> Trial Summary

---

## Success on Lettuce

---

A grower trial was conducted using ON-Gard on field-grown lettuce to determine if there were any observable effects on plant health. The trial was conducted at one of the largest lettuce producers in North America. This is what they observed:

### Results:

- Yields on a dry matter basis increased 8 - 13%
- Treated lettuce heads were ready for harvest 3 - 5 days earlier than non-treated
- *Sclerotinia* infection levels were less on ON-Gard treated plants

### Methods:

- ON-Gard at 10 fl oz/acre applied twice using 32 gallons of water per acre
- Trials were initiated at a large (1,000+ acres) grower of lettuce and other crops
- Timing of first application: 4-leaf stage
- Timing of second application: at head formation (approx. 2 weeks later)

Refer to product labels for complete application details. Additional technical information is available on our website ([www.bioworksinc.com](http://www.bioworksinc.com)) or from your BioWorks technical sales rep. Always read and follow label instructions.
