Field Notes from BioWorks

Did You Know...

June 2008

RootShield® Granules can be ordered *pre-blended*?

Make it a little easier on yourself as you head into the fall and Christmas planting seasons. Have RootShield Granules biological fungicide pre-incorporated into your mix from your soil blender. It is compatible in all mixes, including propagation, plug, potting, and general purpose, including mixes containing bark.

Plus, RootShield Granules is cost effective — it works continuously for 10 to 12 weeks preventing root diseases, costs only about 2¢ per 6" pot, and eliminates or significantly reduces drenching labor and time.

RootShield Granules Mixing Rates:

- » **For small volumes:** Blend 3 tbsp. per cu. ft. of potting soil
- » **For large volumes:** 1.25 - 1.5 lbs. per cu. yd. of mix, or a minimum of three 40 lb. bags per truckload of mix (100 cu. yds.)
