Info To Grow

June 2008

The Sustainable Way to Protect Your Poinsettias... ...with products that WORK!

June is the month when most growers gear up for their big poinsettia season. Growing crops successfully requires complete protection through ALL stages of development.

BioWorks offers a proven, cost-effective program for controlling insects and plant diseases on poinsettias at each development stage - from stock plants to cuttings and propagation to transplanting into finish pots.

BioWorks products are safe - *and effective* - alternatives to chemical pesticides.

- **PlantShield® HC/ RootShield® Granules** - Proven track record in preventing root rot. *Protects plants 10-12 weeks for less than 2¢ per 6" pot!*
- **NemaShield™** - Outstanding for controlling fungus gnat larvae.
- **BotaniGard®** - Proven control of whiteflies and an excellent resistance management tool.
- **MilStop®** - Great for powdery mildew and *Botrytis* control.

NEW:

- **CEASE™** - Controls foliar fungal and bacterial pathogens in propagation and after transplant, *without* residues. Successful in controlling *Botrytis* & *Erwinia*. Can also be used immediately before or after a B-Nine application without phytotoxicity.
