## Reports of *Erwinia*: Treat your poinsettias now with **CEASE®**

Several of our Technical Sales Managers have heard growers express concern about a recent outbreak of *Erwinia* on this year's poinsettia crop. As you know, losses from this pathogen can be catastrophic. Symptoms include wiltings and rapidly developing soft rot of tissues.

### Don't let this happen to you.

Treat your plants now with CEASE microbial fungicide and bactericide. Use it in place of, or in rotation with, copper-based products to control bacterial diseases such as *Erwinia*. CEASE is very safe to plants and virtually residue-free.

### Features:

- » 4-hour REI
- » Leaves virtually no residues on plant foliage or flowers
- » Multi-site modes of action for resistance management
- » Safe for beneficial insects and bees
- » Compatible for tank-mixing/rotating with many other registered products

**Note:** Use a spreader/sticker or wetting agent with CEASE to improve canopy penetration and coverage.
