

BioWorks Product Included in Trial

Sandrine Copper Fungicide

Summary: Sandrine outperformed competitors in lowering incidence percentage for bacterial spot in peach fruit.

Method Summary	
Crop	Peach
Variety	O'Henry
Location	Bridgeton, New Jersey
Disease	<i>Xanthomonas arboricola</i>
Trial Design	Completely randomized
Application Dates	12 total applications throughout growing season. May 3rd (shuck split) to July 29th (11th cover).

Test Description: Randomized complete block design in the field with 4 replicate single tree plots per treatment. Sandrine applied at 75 and 50 oz/acre in 100 gal/acre spray. For disease assessments, 25 peaches were selected from each tree, arbitrarily and total number of lesions was counted on each fruit.
