

## TOTALNEMA A<sub>x</sub><sup>™</sup> : EARLY DIE COMPLEX ON POTATO YIELD

TotalNema A<sub>x</sub> controls nematode populations through direct contact, disrupting respiratory systems and causing paralysis. Formulated with a proprietary blend of essential oils, it offers growers total flexibility with strong efficacy and no REI, no PHI, minimal PPE requirements, and no MRLs.

### ACTIVE INGREDIENTS

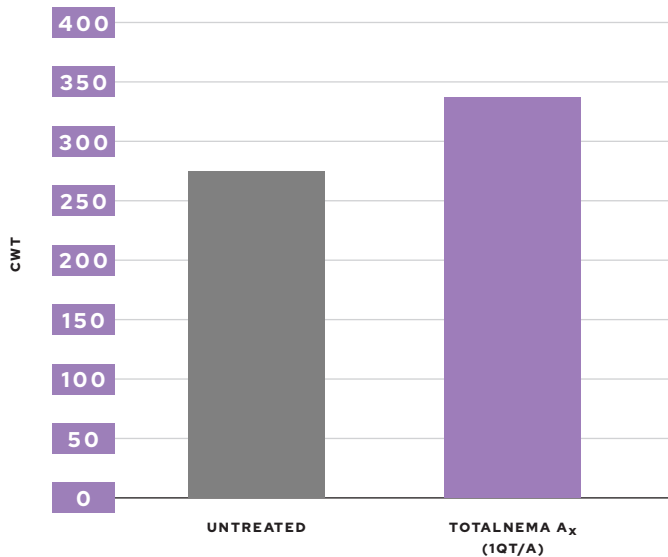

- + Castor Oil, Clove Oil and Eugenol

### FEATURES AND BENEFITS

- + 25(b) botanical nematicide with multiple modes of action
- + Low use rates, economical over large acreage
- + No known risk of pest resistance

### TRIAL DATA

TRIAL CONDUCTED BY ROBERT SCHAFER, OWNER/  
AGRONOMIST OF/FROM MID-MICHIGAN AGRONOMY.

#### Methods:

- + Management of Early Die Complex on Manistee potato. Four replications per treatment
- + TotalNema A<sub>x</sub> applied as a pre-plant broadcast, in furrow at planting, 14 days after planting, and 28 days after planting

#### Result:

- + TotalNema A<sub>x</sub> significantly improved total yield by ~23%
